# **Report in Line with the TCFD Recommendations**

In October 2018, MCHC announced its support for the final recommendations prepared by the Task Force on Climate-related Financial Disclosures (TCFD\*).

Within the framework of enhanced climate change-related measures, the MCHC Group is working for improved solutions in GHG reduction and the carbon cycle, which are among the growth businesses identified in its mediumto long-term basic management strategy, KAITEKI Vision 30 (KV30), as well as progressing with measures toward achieving the strategy's target for GHG reduction. Progressive enhancement of information disclosure is another initiative which we are targeting to increase our corporate value.

\* In June 2017, TCFD announced the final recommendations concerning disclosure of information to encourage companies to voluntarily disclose to investors the impacts of climate change-related risks and business opportunities on corporate finances.

The report based on the TCFD recon ndations is also posted on our website. https://www.mitsubishichem-hd.co.jp/english/ir/library/tcfd.html KAITEKI Vision 30 is presented in detail on our website.

#### Governance

At MCHC, we have identified GHG reduction, environmental impact reduction and circular economy as the material issues (see P. 38) to be addressed in our medium-term management plan, APTSIS 25. In parallel, we have set management indicators and targets (see Metrics and targets) to measure progress with these initiatives to mitigate and adapt to climate

change. Going forward, we will continue to monitor progress against the target values set for each operating company, acting in line with the KAITEKI Initiative Structure (see P. 43), centered on the KAITEKI Promotion Committee, a body under the advisory control of the MCHC president.

### Strategy and risk management

## **Metrics and targets**

| Category   | Contents of report   | Related pages   |
|--|--|---|
| Metrics and<br>targets to assess<br>risks and<br>opportunities | Of the management indicators used to measure progress with material issues (MOS Indices), we have set medium-term targets in two selected items: the percentage reduction in GHG emissions and the percentage contribution of the GHG reduction and carbon cycle business areas to total sales revenue. We will carry out annual evaluation of the state of progress. Regarding the percentage reduction in GHG emissions, we will aim for reductions in line with the target levels of the respective national and regional governments. In Japan, we are taking forward concrete measures aimed at meeting the KV30 fiscal 2030 target of a 26% reduction in domestic emissions compared to fiscal 2013. Going forward, we are committed to exploring further emissions reduction in line with the approach adopted by the respective national and regional governments. | New MOS Indices (P. 39–42)                                |
| Scope 1–3<br>GHG emissions                                     | baya received independent accurance for CLIC emissions, and are working to disclose highly   |   |
| Director<br>remuneration                                       | The performance-based evaluation of the remuneration of corporate executive officers and executive officers is determined based on the degree of achievement of the targets for each fiscal year. The evaluation is determined by using indices* including those associated with the improvement of sustainability in addition to economic and capital efficiencies, such as indices associated with climate change through the promotion of energy-saving activities. For details, please refer to the Securities Report.<br>* From fiscal 2021, we will shift to new MOS Indices. For a detailed explanation, please refer to New MOS Indices on P. 39–42.   | Corporate Governance:<br>Director remuneration (P. 66–68) |
